Wear, *117* (1987) 395 - 397

SUBJECT INDEX

Abrasion
microstructure and abrasive wear resistance of cast Ni–Cr–C alloys, 289
a new model for two-body abrasive wear based on the localization of plastic deformation, 1
Alloys
microstructure and abrasive wear resistance of cast Ni–Cr–C alloys, 289
polishing of brittle amorphous alloys, 359
wear resistance and microstructure of Zn–Al–Si and Zn–Al–Cu alloys, 79
Aluminium
wear resistance and microstructure of Zn–Al–Si and Zn–Al–Cu alloys, 79
Asperities
an elastic approach to rough contact with asperity interactions, 211

Ball-bearings
the actual motion and the contact angle of a ball in a deep groove ball-bearing II: shaft speed N_i = 100 rev min^{-1}; thrust load F_a = 600, 800 and 1000 N, 251
Bearings
analysis of hydrodynamic slider thrust bearings lubricated with non-newtonian fluids, 91
effect of operating parameters on the threshold voltages and impedance response of non-insulated rolling element bearings under the action of electrical currents, 223
an overall optimum design of a sector-shaped thrust bearing with continuous circumferential surface profiles, 49
temperature, pressure and film thickness measurements for an offset half bearing, 197

Carbon
microstructure and abrasive wear resistance of cast Ni–Cr–C alloys, 289
tribological properties of unidirectional polyphenylene sulphide–carbon fibre laminate composites, 147

Cast irons
dry sliding wear of grey cast iron containing 0.2 - 1.0 wt.% P, 375
Cavitation wear
cavitation wear of untreated and laser-processed hardfaced coatings, 103
Chromium
microstructure and abrasive wear resistance of cast Ni–Cr–C alloys, 289
Coatings
cavitation wear of untreated and laser-processed hardfaced coatings, 103
Composites
tribological properties of unidirectional polyphenylene sulphide–carbon fibre laminate composites, 147
Contacts
the actual motion and the contact angle of a ball in a deep groove ball-bearing II: shaft speed N_i = 100 rev min^{-1}; thrust load F_a = 600, 800 and 1000 N, 251
an elastic approach to rough contact with asperity interactions, 211
Copper
wear resistance and microstructure of Zn–Al–Si and Zn–Al–Cu alloys, 79
Cracks
metallographic aspects of surface damage, surface temperature and crack initiation in fretting fatigue, 347

Debris
an analysis of the debris in ultrasonic-assisted electrical discharge machining, 241
Deformation
a new model for two-body abrasive wear based on the localization of plastic deformation, 1

Electrical currents
effect of operating parameters on the threshold voltages and impedance response of non-insulated rolling element bearings under the action of electrical currents, 223

© Elsevier Sequoia/Printed in The Netherlands

Electrical discharge machining
an analysis of the debris in ultrasonic-assisted electrical discharge machining, 241
Erosion
erosion of AISI 4140 steel, 37
erosion of steels in coal–solvent slurries, 115
liquid–solid particle slurry erosion of steels, 129

Fatigue
metallographic aspects of surface damage, surface temperature and crack initiation in fretting fatigue, 347
rolling contact fatigue of a rail steel, 319
Fibers
tribological properties of unidirectional polyphenylene sulphide–carbon fibre laminate composites, 147
Four-ball testing
an experimental study of initial scuffing and recovery in sliding wear using a four-ball machine, 267
Fretting
metallographic aspects of surface damage, surface temperature and crack initiation in fretting fatigue, 347
Friction
on the friction of bodies rolling under gravity, 109
frictional behaviour of sputtered TiN, 161

Impedance
effect of operating parameters on the threshold voltages and impedance response of non-insulated rolling element bearings under the action of electrical currents, 223

Laser
cavitation wear of untreated and laser-processed hardfaced coatings, 103
Lubricants
lubricant flow through the nozzle of a drawing die, 309
Lubrication
analysis of hydrodynamic slider thrust bearings lubricated with non-newtonian fluids, 91
plastic flow process of surface layers in flow wear under boundary lubricated conditions, 179

Machining
an analysis of the debris in ultrasonic-assisted electrical discharge machining, 241
Metallography
metallographic aspects of surface damage, surface temperature and crack initiation in fretting fatigue, 347
metallographic evidence for the nucleation of subsurface microcracks during unlubricated sliding of metals, 381
Metals
metallographic evidence for the nucleation of subsurface microcracks during unlubricated sliding of metals, 381
Microcracks
metallographic evidence for the nucleation of subsurface microcracks during unlubricated sliding of metals, 381
Motif combination
comparison of motif combination with mean line and envelope systems used for surface profile analysis, 335

Nickel
microstructure and abrasive wear resistance of cast Ni–Cr–C alloys, 289
Non-newtonian fluids
analysis of hydrodynamic slider thrust bearings lubricated with non-newtonian fluids, 91

Particles
liquid–solid particle slurry erosion of steels, 129
Polishing
polishing of brittle amorphous alloys, 359
Polyphenylene sulphide
tribological properties of unidirectional polyphenylene sulphide–carbon fibre laminate composites, 147

Rails
rolling contact fatigue of a rail steel, 319

Rolling
on the friction of bodies rolling under gravity, 109
Rolling contact
rolling contact fatigue of a rail steel, 319

Scuffing
an experimental study of initial scuffing and recovery in sliding wear using a four-ball machine, 267
Silicon
wear resistance and microstructure of Zn–Al–Si and Zn–Al–Cu alloys, 79
Sliding
dry sliding wear of grey cast iron containing 0.2 - 1.0 wt.% P, 375
an experimental study of initial scuffing and recovery in sliding wear using a four-ball machine, 267
metallographic evidence for the nucleation of subsurface microcracks during unlubricated sliding of metals, 381
Slurries
erosion of steels in coal–solvent slurries, 115
liquid–solid particle slurry erosion of steels, 129
Steel
erosion of AISI 4140 steel, 37
erosion of steels in coal–solvent slurries, 115
liquid–solid particle slurry erosion of steels, 129
rolling contact fatigue of a rail steel, 319
Surfaces
comparison of motif combination with mean line and envelope systems used for surface profile analysis, 335
metallographic aspects of surface damage, surface temperature and crack initiation in fretting fatigue, 347
an overall optimum design of a sector-shaped thrust bearing with continuous circumferential surface profiles, 49
plastic flow process of surface layers in flow wear under boundary lubricated conditions, 179

Threshold voltages
effect of operating parameters on the threshold voltages and impedance response of non-insulated rolling element bearings under the action of electrical currents, 223
Titanium
frictional behaviour of sputtered TiN, 161
Tribological properties
tribological properties of unidirectional polyphenylene sulphide–carbon fibre laminate composites, 147

Wear
cavitation wear of untreated and laser-processed hardfaced coatings, 103
dry sliding wear of grey cast iron containing 0.2 - 1.0 wt.% P, 375
an experimental study of initial scuffing and recovery in sliding wear using a four-ball machine, 267
microstructure and abrasive wear resistance of cast Ni–Cr–C alloys, 289
a new model for two-body abrasive wear based on the localization of plastic deformation, 1
plastic flow process of surface layers in flow wear under boundary lubricated conditions, 179
wear resistance and microstructure of Zn–Al–Si and Zn–Al–Cu alloys, 79

Zinc
wear resistance and microstructure of Zn–Al–Si and Zn–Al–Cu alloys, 79
